Education

Dwarkadas J. Sanghvi College of Engineering, B.Tech in Computer Engineering — Sept 2024 – present
CGPA: 9.15 — Mumbai, India

Experience

Developer Intern, Aelius Turbina LLP — Sept 2026 – present
Solar BIPV manufacturer and EPC, Mumbai, India

- Built a FastAPI pipeline that turns vendor Proforma Invoices (PDFs, scans, chat screenshots) into Zoho Books Purchase Orders via LLM/OCR extraction, GSTIN-verified vendor resolution, item matching, and a submitter + admin review loop
- Built a TallyPrime to Zoho Books sync over Tally's XML gateway with a cached OAuth layer, rate limiting, and GST-aware handling across two state registrations
- Built a self-hosted Tally BI dashboard (Sales, Purchase, Receivables, Cash Flow, P&L) with industry-standard KPIs (DSO, rate variance) over Tally ODBC
- Built an area-based lead engine merging MahaRERA, MCA, MPCB and Google Places into one SQLite store with cross-source dedupe, lead scoring, and human-approved outreach drafts

Developer Intern, ITAakash Strategic Software Pvt. Ltd. — June 2026 – Aug 2026
Mumbai, India

- Built an AI cash-flow forecasting system using Amazon Chronos-2, replacing a legacy XGBoost pipeline, predicting daily net cash flow across thousands of grouped financial records
- Designed a Flask API serving 365-day forecasts per (project, ledger, company) group, integrated into the existing Java EE ERP via PostgreSQL
- Implemented walk-forward backtesting (5 rolling origins, 4-month horizon) with bias correction for right-skewed construction cash flow data

Projects

Vigilia – Graph-Native AML Detection — Jan 2025 – present

- Started as Argus at iDEA 2.0 (Union Bank of India PS3, Team Zeta, Top 40+ finalist); continued past the hackathon under the name Vigilia
- Built graph-native AML system detecting 8 structural typologies plus 7 behavioural signals (structuring, smurfing, layering) on 500K+ IBM synthetic transactions, rebuilt since on a Multi-GNN (PNAConv + GINEConv) classifying transactions directly on the multigraph
- Added FastAPI + PostgreSQL persistence with a documented schema-migration process, an audit trail, and a pytest suite covering pure decision logic

Research

Publicity & Research Member, DJS Anveshan, Research Club — Jan 2024 – present
Dwarkadas J. Sanghvi College of Engineering

- Authored a problem discovery report on a critical Federated Learning failure mode: robust aggregation filters (Krum, FLAME) silently discarding valid non-IID updates from minority institutions in cross-institutional fraud detection
- Identified an unaddressed gap in FL security literature as of 2025, citing IEEE Transactions on Big Data and JPMorgan's Project Aikya

Skills

Languages / Infra: Python, SQL, TypeScript, Bash, C++, Git, Docker, FastAPI, React, PostgreSQL, SQLite
ML / Data: PyTorch, PyTorch Geometric, scikit-learn, XGBoost, LightGBM, NumPy, Pandas, Hugging Face
Integrations: Zoho Books API, TallyPrime (XML/ODBC), OAuth 2.0, Render
